Technical Report No. 35

Office of Naval Research Contract N8onr-520/III Project NR 083 012

Reference 54-23 June 1954

Richard H. Fleming Executive Officer

INTRODUCTION

This report contains inshore data collected from October through December 1952 by the University of Washington personnel aboard the Department of Oceanography research vessel BROWN BEAR. Station location charts are presented before the data for each cruise (see pages 1, 14, 26, and 43). Additional inshore data not contained in this report were obtained with the Salinity-Temperature-Depth Recorder (1) and various current meters. Cruise 17 consisted of serial observations at stations located in the southern ends of East Passage and Colvos Passage.

Station Numbering System

All stations occupied by the BROWN BEAR are numbered consecutively, independent of their location.

Sampling Bottles

Water samples were taken with Nansen bottles and Fjarlie bottles (2).

Determination of Properties

Deep-sea reversing thermometers were used to determine temperature. Copenhagen standard sea water was used exclusively as the standard in the determination of salinity of the sea water. Dissolved oxygen was determined by the modified Winkler method described by Thompson and Robinson (3). The depths reported for sub-surface observations were calculated from measured wire angle, unprotected

reversing thermometer readings, and curves of wire length minus thermometric depth versus wire length (L-Z), as described by LaFond (4).

Data

The time at which the messenger was dropped on the first cast is listed for the +8 time sone. Positions are given to the nearest 0.1 minute. Depth in fathoms was obtained with the aid of a Navy NMC echo sounder aboard the BROWN BEAR. Weather is reported in the Navy bathythermograph weather code given in H. O. Publication No. 606-c, except in cases where the only weather phenomenon reported is the state of the sky. For the state of the sky the following symbols were used: b., clear sky; b.c., blue sky with detached clouds; c., sky mainly cloudy; and o., sky overcast. Wind velocity is reported in knots. Air temperature is reported in degree Fahrenheit.

All data are actual observed values. The maximum depth of sampling was governed by the depth of water. All clearly questionable data have been excluded.

The presentation of these data in this form does not constitute publication. Subsequent, more rigorous analyses of these data may disclose errors which are not apparent at this time.
